Student Study & Lifestyle Analysis

Using Google Forms and Excel

Khushpreet Kaur (24BCA10286) | Bachelor of Computer Applications

Made with GAMMA

Introduction

In today's digital era, students' study habits and lifestyle choices directly impact academic performance. This project collects real-time data using **Google Forms** and analyzes it using **Microsoft Excel** to identify patterns in study behavior, screen time, sleep cycles, and overall productivity.

Survey Tool

Google Forms questionnaire

Analysis Tool

Microsoft Excel

Respondents

10 students surveyed

Made with GAMMA

Objectives

1

Design Survey

Create a structured questionnaire using Google Forms

2

Collect Data

Gather data on students' study habits and lifestyle

3

Analyze with Excel

Use formulas, charts, and pivot tables

4

Draw Conclusions

Visualize data and derive meaningful insights

Why This Topic? Academic performance is directly affected by daily habits — study time, mobile usage, and sleep patterns. Analyzing this data reveals common issues and practical improvements.

Made with GAMMA

Theory of the Topic

Google Forms

Online tool for creating surveys with multiple choice, checkboxes, and short-answer questions.

Data Analysis

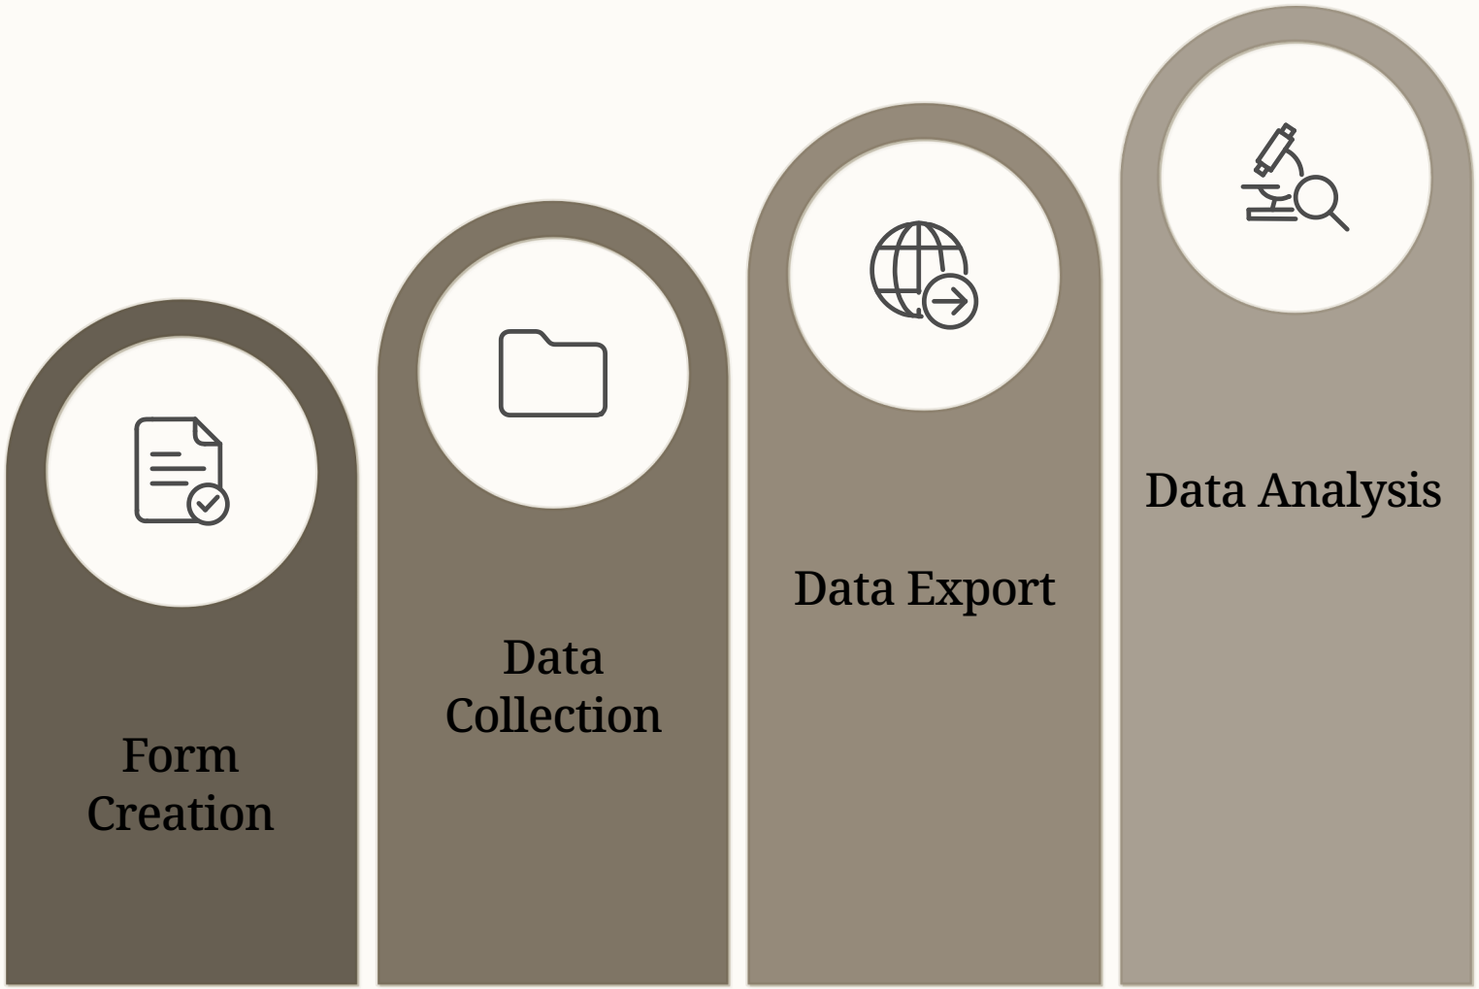
Process of organizing, interpreting, and presenting data to extract useful information and identify trends.

Microsoft Excel

Powerful tool providing formulas (AVERAGE, COUNT), charts (Bar, Pie, Line), pivot tables, and conditional formatting.

Made with GAMMA

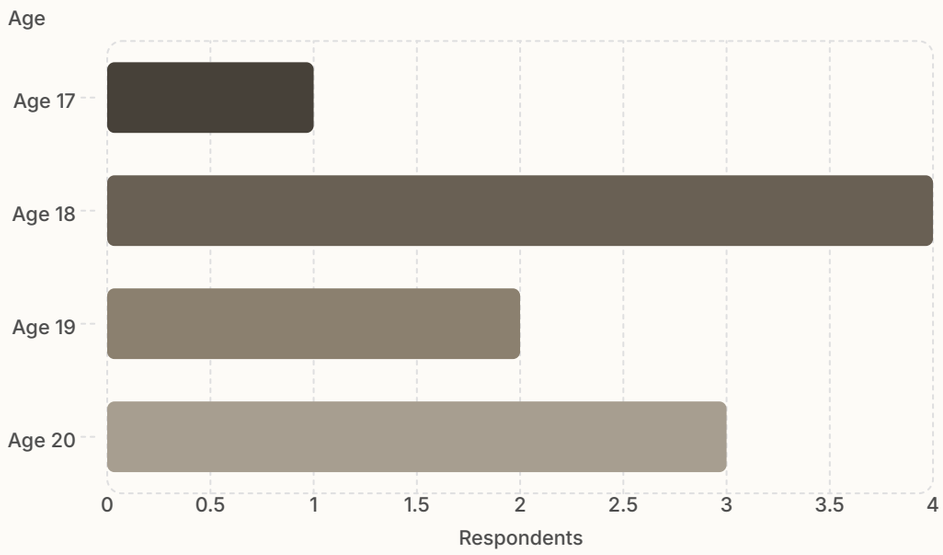
Implementation



The form was structured into **5 sections** covering basic information, study habits, screen time & lifestyle, and health & productivity. All 10 responses were automatically collected and exported to Excel for analysis.

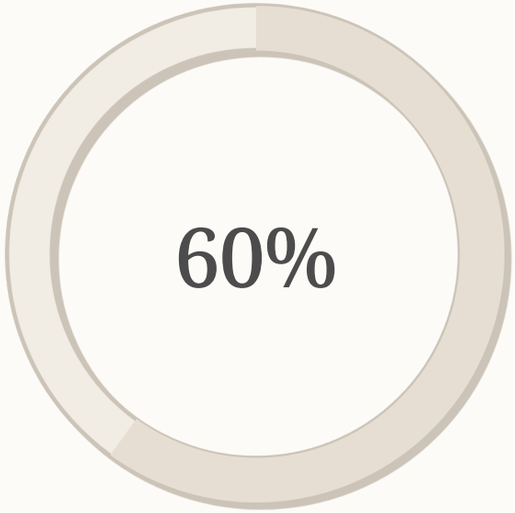
Made with GAMMA

Survey Results: Demographics



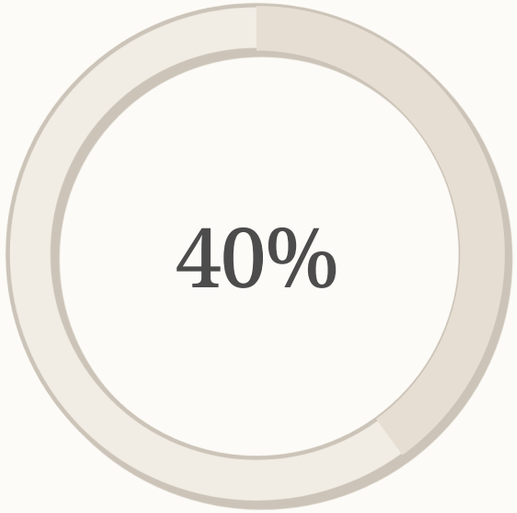
Age Distribution

Age 18 had the highest representation at **40%** (4 respondents), followed by Age 20 at 30%, Age 19 at 20%, and Age 17 at 10%.



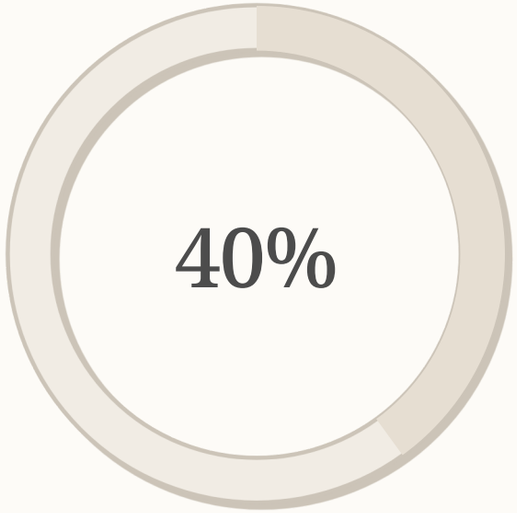
Male

Gender distribution



Female

Gender distribution



BCA

Largest course group

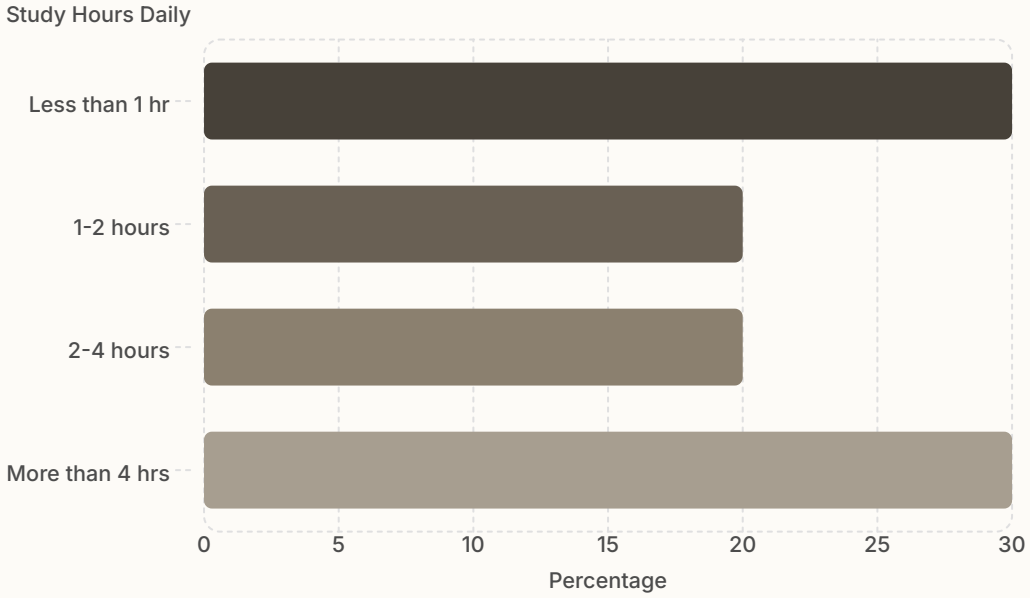
Study Habits & Screen Time

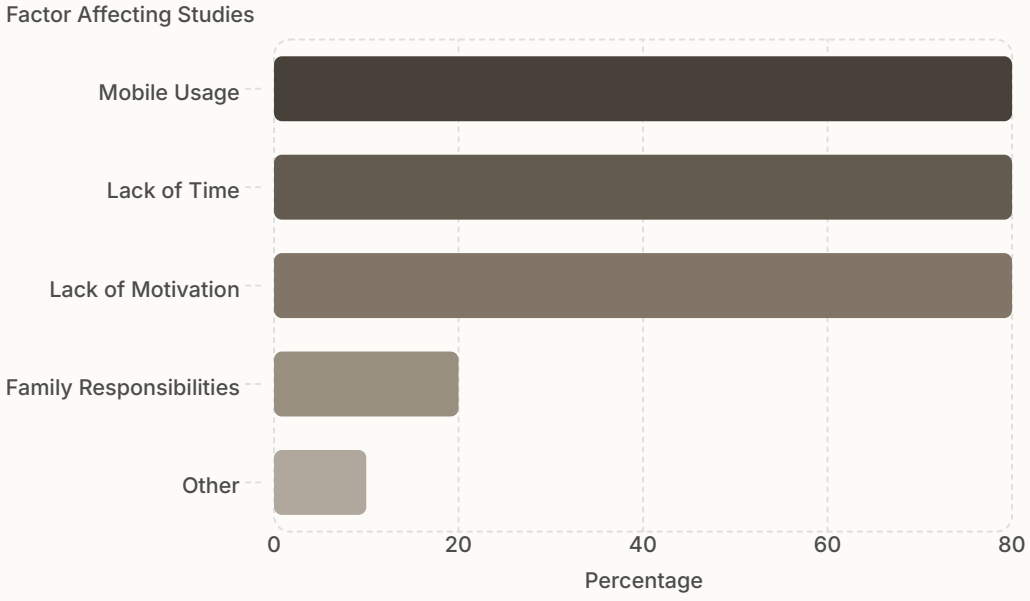


Key Findings

- **60%** of students prefer studying in the **Evening**
- **100%** use online platforms for study
- Most difficult subjects: **English & Mathematics** (30% each)
- Screen time ranges from **3 to 8 hours** daily
- Phone usage: **Study (90%)** and Social Media (80%) top the list

Made with GAMMA

Health, Sleep & Productivity



Health & Productivity Insights

- **70%** of students sleep 7–9 hours daily
- **70%** exercise regularly
- Productivity levels: **30%** rated themselves at levels 3, 4, and 5 each
- Top distractions: **Mobile usage, lack of time, and lack of motivation** (each 80%)
- Health issues had **0%** impact — lifestyle factors dominate

Made with GAMMA

Application, Testing & Future Scope

Applications

Understands student behavior, supports academic improvement strategies, and can be used by institutions for surveys

Testing

All form questions checked for accuracy; data entries and Excel formulas verified for correct results

Future Scope

Increase respondents, use advanced Excel dashboards & slicers, integrate Power BI, add mental health & stress parameters

Made with GAMMA

Conclusion

> This project successfully demonstrates how data can be collected using Google Forms and analyzed using Excel. The findings highlight that students' productivity is influenced by multiple factors — screen time, sleep, and study habits.

Key Insight

Proper time management and reduced distractions can significantly improve academic performance.

Tools Used

Google Forms for data collection; Excel formulas, charts, and pivot tables for analysis.

References

Google Forms, Microsoft Excel documentation, class notes, and online tutorials.
